

## INTRAVASCULAR DELIVERY OF MIZORIBINE

### ABSTRACT OF THE DISCLOSURE

5       The present invention provides improved devices and methods for minimizing  
and/or inhibiting restenosis and hyperplasia after intravascular intervention. In particular, the  
present invention provides luminal prostheses which allow for programmed and controlled  
mizoribine delivery with increased efficacy to selected locations within a patient's  
vasculature to inhibit restenosis. An intraluminal delivery prosthesis may comprise an  
expansible structure and means on or within the structure for releasing mizoribine into the  
10   body lumen to inhibit smooth muscle cell proliferation.
